C3.D2 HHW management system set-up report for the Municipality of Athens

EXECUTIVE SUMMARY

In the context of this specific Sub-Action, a collection network was developed based on the available data, special needs, and spatial and social characteristics of the Municipality of Athens, as described during the implementation of the preparatory action A.2.4.

In particular, during this phase, the necessary equipment for separate collection of HHW was procured (collection vehicle). Also, by facilitating the Municipality of Athens' own resources, a contract is being executed for the management of expired medicines in the municipal clinics, while small bins for the collection of HHW will be distributed to the involved parties.

Furthermore, for the 2024 budget of the Municipality of Athens a procurement regarding a collection service of specific HHW has been scheduled.

Finally, information and awareness-raising activities were implemented and the appropriate material was prepared.
