C4.D8: Refinement and final application of the platform

Executive Summary

The objective of action "C4.2 Development and operation of a platform for the monitoring and management of food waste production prevention" is the design, development and implementation of an online platform for the monitoring and management of food waste prevention. The platform will facilitate communication and effective food donation among potential food donors and recipients, to prevent food waste while meeting social needs.

The platform will serve as a monitoring mechanism to prevent food wastage (through donations), as it will be a hub for other similar but smaller-scale platforms.

After a requirements analysis was performed taking into account the results of the research on the existing platforms and the operation of the organizations involved in food redistribution, the technical specifications of the platform were drawn up.

It is important to underline that the platform will aim to inform and raise awareness of those stakeholders involved in all stages of the food supply chain, from primary production to the final consumer and will be addressed to local government, producers, processing, trade, catering businesses, to NGOs and consumers by providing information (and links to information) on the relevant legislative framework, guides and good practices already implemented, the bodies active in the field of food donation while presenting data on the quantities of food donated.

This report is the deliverable accompanying the Implementation and operation of the platform.
