C3.D1: HHW management system set-up report in Western Macedonia

August 2023

Executive Summary

In the context of this specific Sub-Action, a collection network was developed based on the available data, special needs, and spatial and social characteristics of the Western Macedonia region, as described during the implementation of preparatory action A.2.4.

Specifically, during this phase, the necessary equipment for separate collection of HHW was procured (bins, bags, or other collection means), which was either delivered to the interested parties or placed in selected public spaces.

Additionally, the facilities of DIADYMA were licensed to be able to receive and manage HHW. Finally, contacts were made to expand the collection points for HHW collected by ACS. The Sub- Action concludes with information and awareness-raising activities.
