

## D3.D1

### Indicator Protocol for Measuring the Impact of the LIFE-IP CEI-Greece Pilot and Demonstration Actions

June 2023

## Executive Summary

The monitoring of the performance of both the pilot actions and the demonstration actions of the LIFE-IP project "Implementation of Circular Economy in Greece" is of primary importance for the evaluation of the impact of these actions during the project implementation, as for their following implementation in the other regional areas. Action D3, "Monitoring the impact of the project's pilot and demonstration actions", fulfills the project's requirement to collect data and information in order to periodically report the key performance indicators (KPIs) related to the pilot implementation and demonstration actions. Consequently, the protocol for the collection of performance indicators is a reporting and recording tool, so that the pilot applications and demonstration actions of the project can be monitored in the most convenient and appropriate way. The specific recording and monitoring protocol includes the definition and description of performance indicators, as proposed indicators proposed by partners, their measurement units, the data collection sources, as well as the responsible body for collection and recording. The evaluation of the impact of the pilot and demonstration actions is executed *per se*, but also, indirectly, by assessing the way in which strategies will be applied for their reproduction and the knowledge transfer in other regions of Greece. Finally, the link of the as-fore mentioned KPIs to the dynamic indicators of the Circular Economy database of CINEA is taken into consideration.
