“Report on the implementation of the RRR Experiential Park”

Executive Summary

This report presents the initiation of operations at the Recycling-Reuse-Repair (RRR) Experiential Park, part of the LIFE IP CEI Greece project's efforts to raise public awareness and disseminate results.

The goal of the RRR Park is to promote a culture of prevention and reuse, focusing on environmental awareness and sustainable waste management. It is specifically aimed at students in the Municipality of Thessaloniki (MoT), providing them with hands-on learning about recycling, turning waste into reusable materials, and creating new items.

The RRR facility was set up on a site that serves as a public awareness space for environmental issues, particularly waste management. The labs that will take place allow students to engage directly with real time recycling practices and techniques, in terms of transforming waste to secondary raw materials and furthermore, the materialization of new items.

In addition to students, the RRR park also targets adults—active citizens of Thessaloniki. that can participate in reuse activities, where items are fixed rather than discarded.

As part of its early operation, the RRR park has already hosted workshops and awareness events in the context of the LIFE IP CEI project dissemination efforts. Looking ahead, the Municipality of Thessaloniki has already scheduled the procedures for securing the personnel that will operate certain RRR activities, as well as the procurement of additional equipment that is needed for ensuring the park's full-scale operation.
