Survey period: 20/09/2023-10/10/2023

Company name: S.M.R. CONSULTANTS

Survey principal: Ministry of Environment and Energy

## RESULTS

According to the statistics of the survey, citizens have become more familiar with the "circular economy" project and more and more people, stakeholders and interested parties are learning especially about the Life IP project and its results. However, further improvement is needed.

The implementation of circular economy in Greek municipalities could pave the way for a sustainable and environmentally responsible attitude of the citizens. In this case, the conditions create a society that shows respect on its resources and prioritizes sustainability. Greek municipalities play a central role in this effort, combining their efforts and adopting innovative practices. It is everyone's duty to promote changes that will lead the future generations to respect the environment and its resources. The circular economy is not just a policy, but a commitment to a greener and more sustainable future for all.
