C2.D1B: Report on the completed technical arrangements/infrastructure for Paros & Antiparos

June 2025

Executive Summary

The deliverable presents the technical interventions and infrastructures designed and implemented in the Municipalities of Paros and Antiparos, aimed at enhancing sustainable solid waste management within an integrated approach and with emphasis on the principles of the circular economy. It describes the implementation of actions such as Source Separation (SR) of recyclable materials from catering businesses, the implementation of collection, reuse and recycling systems for the management of bulky waste, as well as actions for the recovery of textile waste and small furniture from hospitality businesses. It also describes the procurement of equipment for separate collection and temporary storage of the collected waste streams and the budget for the implementation of each action.

The report serves as a guide for implementing similar initiatives in other islands or mountainous areas of Greece, reinforcing the principles of circular economy and promoting the efficient management of resources.
