

C2.D3:
Report on the completed technical arrangements/infrastructure for Thira

June 2025

Executive Summary

This report outlines the technical interventions and infrastructure designed and implemented in the Municipality of Thera, describes the implementation of actions such as Source Separation (SS) for recyclables in businesses and an educational programme for waste reduction. It also describes the procurement of equipment for separate collection and temporary storage of the collected solid waste streams and the budget for the implementation of each action. Particular emphasis is placed on the adjustments made to ensure that the interventions meet the specific needs of the island, taking into account the dynamics of the tourist season and the challenges arising from it.

The report is a useful source of guidance for the implementation of similar initiatives in other island or mountainous regions of Greece, reinforcing the principles of the circular economy and promoting the efficient management of resources.
